

## Assembly instruction sound reduction hood

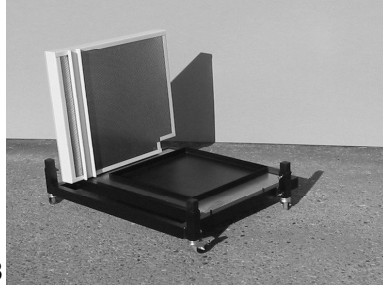

1

put the base plate in position, insert legs with wheels, adjust height, fix the legs

2

put the oil drip pan onto the base plate

3

put a side cover element (pins on frame of the base plate)

4

put the back cover element onto the base plate, connection with draw latches

5

put the other side cover element onto the base plate, connection with draw latches

6

put the splitter for the noise-reduced air inlet into the guiding profiles at the side covers

7

optimize the sealing of the cutouts for oil / gas / electrical lines with self adhesive foam tape

8

put the top cover element onto the side cover elements, drive the sound reduction hood over the burner for final adjustment
